Overview

My research interests span a variety of domains within human-computer interaction, including, learning input techniques, augmented/mixed/virtual reality, and 2D/3D interaction – with the overarching goal of understanding human behaviour while interacting with emerging technology. My fundamental computer science background paired with interdisciplinary training in psychology and mathematics has placed me in a unique position to make meaningful contributions to the field; evident through my numerous publications at top-tier venues.

Publications

*** **Note about venues**: in Human-Computer Interaction (HCI), conference proceedings are the preferred publication venues, being timelier and having the greatest impact (typical for experimental computer science). Top tier conferences require rigorous multi-stage review of manuscripts for archival proceedings. CHI (ACM's Conference on Human Factors in Computing Systems) and IMWUT (The Proceedings of the ACM on Interactive, Mobile, Wearable and Ubiquitous Technologies) are ranked #1 and #3, respectively, in HCI (via Google Scholar).
